

Investigation of cyber attacks

Description

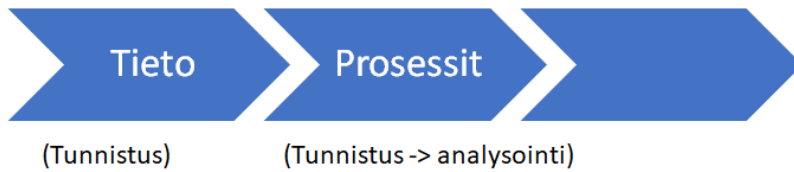

(related to/part of theme "Information Governance & Integrity")

4. Proving the integrity

- Tools/toolsets and processes for public authorities (police, customs, border control, KTK, military, etc.) for investigation of cyber attacks

Ideas

- Recording DOS attacks in WSNs
- Provability: authentic vs. non-authentic

Questions

- What kind of toolset public authorities will need, so that it will be possible for them to (successfully) investigate ongoing or already happened cyber attack?
- SOL-operations
- Forensics
- Incident response -processes
- Planning and process to do post-mortem cyber forensic to unknown cyber threats
